

BRAINSTORMING & IDEATION PHASE

MODULE 2 : Define the Problem Statements

Date :	27.09.2026
Team ID :	SWTID-2026-9496
Project Name :	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	2 Marks

Customer Problem Statement Template

Create problem statements to understand the point of view of the users involved in the IT procurement process for standard laptop requests. The Customer Problem Statement template helps identify the difficulties faced by users and IT procurement staff while processing approved laptop requests, creating tasks, and assigning them to the appropriate team.

A well-articulated problem statement helps the team understand the challenges in the existing laptop procurement process and identify the requirements for a streamlined and automated solution using ServiceNow Flow Designer.

Framework Guidance & Field Definitions

Field	Description
I am...	Describe the customer/user and their role.
I'm trying to...	Describe what the customer/user is trying to achieve.
But...	Describe the problem or barrier they face.
Because...	Describe the reason causing the problem.

Which makes me feel...	Describe how the customer/user feels when facing the problem.
------------------------	---

Customer Problem Statement Breakdown

Customer Problem Statement Breakdown					
Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS1	IT Procurement Staff	Process Standard Laptop requests efficiently after approval	Creating and assigning tasks requires manual effort	There is no automated process for generating and assigning the required task	Frustrated by repetitive work and concerned about processing delays
PS2	Hardware Team	Receive laptop configuration tasks promptly	Approved requests may require manual task creation and assignment before work can begin	Task creation and assignment are handled manually	Concerned about delays in starting laptop configuration
PS3	IT Procurement Manager	Maintain a consistent and efficient laptop procurement process	Manual processing can make request handling difficult to monitor and manage	The process involves repetitive manual activities and depends on timely task assignment	Concerned about inefficient resource allocation and inconsistent request processing

Selected Problem Focus

The project focuses on the problem faced by IT Procurement Staff in manually processing approved Standard Laptop requests and creating and assigning the required tasks. The proposed solution uses ServiceNow Flow Designer to streamline the process by automating task creation and assignment to the appropriate Hardware team.

This focus directly addresses the need to reduce manual effort, improve consistency, and support timely processing of Standard Laptop requests.
