

REQUIREMENT ANALYSIS

MODULE 2 – DATA FLOW DIAGRAM & USER STORIES

Date :	27.09.2026
Team ID :	SWTID-2026-9496
Project Name :	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Data Flow Diagram (DFD)

DFD Level 1 – Standard Laptop Procurement Automation

Flow Explanation

1. Standard Laptop Request:

The requester accesses the ServiceNow Service Catalog and selects the **Standard Laptop** Catalog Item.

2. Request Submission:

The requester enters the required information and submits the laptop request. A Requested Item is created in ServiceNow.

3. Approval:

The request is reviewed through the approval process. Once the request is approved, it proceeds to the next stage.

4. Flow Designer Processing:

The **Standard Laptop Task** Flow Designer flow is triggered for the approved request. The flow automates the creation of the required Catalog Task.

5. Catalog Task Creation:

A Catalog Task is automatically created with the required task details and assigned to the **Hardware** Assignment Group.

6. Hardware Processing:

The Hardware team receives the task and performs the required laptop configuration and processing.

7. Verification & Completion:

The task and Requested Item are checked to verify that the task was created correctly, assigned to Hardware, and processed successfully.

User Stories

USER STORIES – STANDARD LAPTOP PROCUREMENT AUTOMATION

User Type	Functional Requirement	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Requester	Standard Laptop Request	USN-1	As a requester, I can submit a Standard Laptop request through the Service Catalog so that my laptop requirement is recorded.	Standard Laptop request is successfully submitted and a Requested Item is created.	High	Sprint 1
IT Procurement Staff	Request Approval	USN-2	As IT procurement staff, I can process the Standard Laptop request through the approval stage so that only approved requests proceed for processing.	The request shows the appropriate approval status before further processing.	High	Sprint 1
ServiceNow Administrator	Flow Configuration	USN-3	As an administrator, I can configure the Standard Laptop Task flow in Flow Designer so that approved requests can be processed automatically.	The flow is saved, activated, and associated with the Standard Laptop Catalog Item.	High	Sprint 1
ServiceNow Administrator	Automatic Task Creation	USN-4	As an administrator, I can configure the flow to create a Catalog Task for an approved Standard Laptop request.	A Catalog Task is automatically created after the request is approved.	High	Sprint 1
Hardware Team	Task Assignment	USN-5	As a Hardware team member, I can receive the Standard Laptop Catalog Task automatically so that laptop configuration can begin without manual task assignment.	The created task is assigned to the Hardware Assignment Group.	High	Sprint 2
IT Procurement Staff	Testing & Verification	USN-6	As an IT procurement staff member, I can verify the created Catalog Task and assignment so that the automated process works as expected.	The task contains the correct Requested Item, short description, assignment group, and processing status.	High	Sprint 2

Data Flow Summary

The Data Flow Diagram represents the movement of a **Standard Laptop request** from submission through approval, automated task creation, Hardware assignment, and final verification. **Flow Designer acts as the main automation component**, reducing the need for manual Catalog Task creation and assignment.

Requirement Analysis Summary

The requirement analysis identifies the main users, system interactions, functional requirements, and expected outcomes of the Standard Laptop procurement automation. The DFD shows how information moves through the ServiceNow Service Catalog, approval process, Flow Designer, Catalog Task, and Hardware team, while the user stories define the expected system behavior and acceptance criteria.
