

REQUIREMENT ANALYSIS

MODULE 4 – Technical Stack

Date :	27.09.2026
Team ID :	SWTID-2026-9496
Project Name :	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Technical Architecture

Layer 1: User Interface

- ServiceNow Service Catalog
- Standard Laptop Catalog Item
- Requested Item Form
- Catalog Task Form

Layer 2: Request & Approval Logic

- Standard Laptop Request
- Requested Item
- Approval Process
- Approval Status

Layer 3: Automation & Processing Logic

- Flow Designer
- Standard Laptop Task Flow
- Create Catalog Task Action
- Assignment Group Configuration

Layer 4: Infrastructure

- ServiceNow Cloud Instance

- Personal Developer Instance (PDI)
- Web Browser

Layer 5: Data Storage

- Service Catalog Item
- Requested Item Records
- Catalog Task Records
- Approval Records

Layer 6: User / Team Processing

- Requester
- IT Procurement Staff
- Hardware Assignment Group
- Hardware Team

Technology Stack Components

TECHNOLOGY STACK COMPONENTS			
S.No	Component	Description	Technology
1	Service Catalog	Provides the Standard Laptop Catalog Item for submitting requests.	ServiceNow Service Catalog
2	Requested Item	Stores the submitted Standard Laptop request for further processing.	ServiceNow Requested Item
3	Approval Process	Controls the approval of the Standard Laptop request before task creation.	ServiceNow Approval
4	Automation	Automates processing of approved Standard Laptop requests.	ServiceNow Flow Designer
5	Catalog Task	Stores the task created for laptop configuration and processing.	ServiceNow Catalog Task
6	Assignment	Assigns the created task to the appropriate Hardware team.	ServiceNow Assignment Group
7	Data Storage	Stores request, approval, and task-related information.	ServiceNow Tables
8	Infrastructure	Provides the environment for developing and executing the solution.	ServiceNow Cloud / PDI
9	Configuration Management	Maintains and transfers the project configuration between environments.	Update Set

Platform

ServiceNow

ServiceNow is used as the main platform for creating and managing the Standard Laptop procurement request, approval, Catalog Task, and assignment process.

Automation Tool

Flow Designer

Flow Designer is used to automate the Standard Laptop procurement process. It processes the approved request and automatically creates the required Catalog Task and assigns it to the Hardware Assignment Group.

This directly matches the reference's use of Flow Designer as the main automation component, while adapting the purpose to your project.

Data Storage

ServiceNow Tables

ServiceNow tables are used to store the information related to the Standard Laptop procurement process, including:

- Catalog Item
- Requested Item
- Approval information
- Catalog Task
- Assignment Group
- Task Status

Configuration

ServiceNow Catalog & Flow Configuration

The Standard Laptop Catalog Item, approval process, Flow Designer flow, Catalog Task details, and Hardware Assignment Group are configured within ServiceNow.

The **Standard Laptop Task** flow is associated with the Standard Laptop Catalog Item to automate the required task-processing workflow.

Deployment & Maintenance

Update Set

An **Update Set** can be used to maintain the ServiceNow project configuration and transfer the developed configuration between ServiceNow environments.

The reference also identifies Update Set as the mechanism for configuration management and deployment.
