

Project Design Phase

Module 2: Proposed Solution

Date :	27.09.2026
Team ID :	SWTID-2026-9496
Project Name :	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	2 Marks

1. Executive Summary

The proposed solution introduces an automated laptop procurement workflow using ServiceNow Flow Designer. The solution standardizes the laptop request process and automatically manages approval, procurement, and fulfillment activities. Instead of manually processing each laptop request, the system triggers a predefined flow when an employee submits a standard laptop order. The flow sends the request for approval, creates the required procurement or fulfillment tasks after approval, and updates the request status automatically.

2. Core Features & System Capabilities

Standard Laptop Request Form: Provides a structured form for employees to request a standard laptop and captures required details such as employee information, department, laptop type, and reason for request.

Automated Flow Trigger: Flow Designer automatically starts the workflow when a new laptop request is submitted, eliminating the need for IT staff to manually initiate the process.

Automated Approval: Routes the request to the appropriate manager or authorized approver. The workflow continues automatically based on the approval decision.

Automatic Procurement Task Creation: After approval, the system automatically creates a task for the IT procurement team with the required request details.

Request Status Management: Automatically updates the request status during different stages so employees and IT teams can track progress.

Notification Automation: Sends notifications when the request is submitted, approved, rejected, or completed, reducing manual communication.

Auditability & Execution Tracking: Maintains workflow execution information and request activity to help administrators monitor progress and identify workflow issues.

3. Proposed End-to-End Workflow

- 1. Laptop Request Submission:** The employee submits a standard laptop request through the ServiceNow request/catalog interface.
- 2. Flow Trigger:** Flow Designer detects the new request and automatically starts the predefined laptop procurement flow.
- 3. Approval:** The system sends the request to the appropriate manager/approver.
- 4. Approval Decision:** If approved, the workflow continues to procurement. If rejected, the request is updated and the requester is notified.
- 5. Procurement Task Creation:** For an approved request, Flow Designer automatically creates a procurement/fulfillment task for the IT team.
- 6. Laptop Fulfillment:** The IT/procurement team processes the order and prepares the standard laptop.
- 7. Completion & Notification:** The request status is updated to completed and the employee receives a notification.

4. Expected Benefits & Outcomes

- **Reduced Processing Time:** Automates repetitive laptop procurement activities.
- **Faster Approvals:** Automatically routes requests to the required approver.
- **Consistent Process:** Ensures every standard laptop request follows the same workflow.
- **Reduced Manual Effort:** Minimizes manual task creation and status updates.
- **Improved Visibility:** Provides clear request status throughout the procurement process.
- **Better Process Tracking:** Maintains workflow activity and execution information.
