Demonstration Overview

The demonstration video presents the complete implementation of the **Standard Laptop Procurement Automation** project in ServiceNow. It demonstrates the configuration of the Standard Laptop Catalog Item, approval process, Flow Designer automation, automatic Catalog Task creation, Hardware team assignment, testing, and verification of the completed workflow.

Phases Demonstrated

1. Phase 1 – Configure the Standard Laptop Catalog Item

Configuring the **Standard Laptop** Catalog Item in the ServiceNow Service Catalog and making it available for users to submit laptop requests.

2. Phase 2 – Submit the Standard Laptop Request

Accessing the Service Catalog, selecting the **Standard Laptop** Catalog Item, entering the required information, and submitting the request.

3. Phase 3 – Process the Requested Item

Opening the submitted **Requested Item** and verifying the request details before proceeding with the approval process.

4. Phase 4 – Complete the Approval Process

Processing the Standard Laptop request through the approval stage and verifying that the request receives the required **Approved** status.

5. Phase 5 – Configure the Flow Designer

Creating the **Standard Laptop Task** flow in Flow Designer and configuring the Service Catalog trigger for the Standard Laptop request.

6. Phase 6 – Configure Automatic Catalog Task Creation

Configuring the flow to automatically create a **Catalog Task** for an approved Standard Laptop request, with the required task description and Requested Item details.

7. Phase 7 – Configure Hardware Assignment

Configuring the created Catalog Task to be automatically assigned to the **Hardware** Assignment Group so that the appropriate team can process the laptop configuration task.

8. Phase 8 – Test and Verify the Automation

Placing a test Standard Laptop order, completing the approval process, and verifying that the Catalog Task is automatically created with the correct Requested Item, task details, and **Hardware** assignment.

Demonstration Outcome

The demonstration shows the complete working process of the **Standard Laptop Procurement Automation** solution, from submitting a Standard Laptop request through approval to the automatic creation and assignment of the Catalog Task. This confirms that **Flow Designer**

successfully automates the required task creation and assignment process, reducing manual intervention and supporting consistent processing of Standard Laptop requests.
